# DISPENSERS GROUP

## Sample 5

The DISPENSERS GROUP is linked to 4 takeaway lanes and is able to feed a SHRINK FILM machine at the rate of 40 trays / mn

- In this case, a PLASTIC COVER dispenser and a TOPTRAY dispenser are set on a conveyor grouping together 4 packing lanes.
- The work in resumption is also possible with the grouping conveyor belt (A)
- A TRANSLATORY UNIT for ink jet head can be set after the dispensers.
- Every dispenser unit is replacable with an other and is able to run at the speed of 40 trays/mn (The LABEL inserter also exists with double head and double interchangeable magazine)
- The LABEL inserter can be completed with an additional "immobilization kit" (points of glue). With such equipment, it's possible to lay in very precise position light and small labels.
- As well, a TRANSLATORY UNIT for ink jet head can be set just after the LABEL inserter. With such equipment, it's possible to date and to customize standard labels
